

OIL SKIMMER SOLUTIONS

Application: Oil skimmers are used in a variety of instances. Whether to filter cleaning fluids in parts washers, remove contaminants from cutting oil in CNC's and other machine tools, or tramp oil removal, these motorized units are offered in various speeds, sizes, and configurations.

Situation: Our customer was assembling a motor into a fabricated mounting plate, then added a fabricated housing, power cord, grommet, and seals. We eliminated the need for fabricated components and supplied a complete TB 2000 with black powder coating, power cord, and seal for direct drive. This also eliminated several inventory components. A true "from box to line" assembly solution.

Motor highlights: UL and cUR Recognized Impedance Protected Coil at 60 Hz • Dust Proof, Heavy Duty Zinc die-cast Housing • *Standard 2 RPM - Other Output Speeds Available • (2) Standard Output Shafts: 3/16" Square or 5/16" Round with Dual Flats • Cellular Manufactured in the USA with Readily Available Components • Optional Power Cords, Conduit Box, or Conduit Connector • Optional Powder Coating – Many Colors Available • Heavy Duty Metal Geartrain Design
